<sup>\\*</sup> For information about return calculations after fees please refer to Table 1.

<sup>\*\*</sup> The monthly distribution return is calculated as the distribution amount declared for the month-end divided by the ex-distribution unit price at the start of the month. Bentham intends to achieve an average distribution rate of 4.50% - 5.50% for FY2017 with taxable income. If there is a shortfall of taxable income, the distribution could possibly include a capital return. The current distribution rate setting was based on the running yield of the Fund as at 30 June 2016 and assumes the Fund continues to achieve an equivalent yield for FY2017. Actual distributions, however, can differ from this setting because of future matters which are not known or able to be presently identified.

<sup>^</sup> Credit yield spread is yield to maturity above the duration adjusted risk free bond rate
