¹ Total Return (after fees) is calculated using pre-distribution month end withdrawal unit prices, and assumes all income is reinvested in additional units. Total Return equals Growth return (after fees) plus Distribution return (after fees).

² Active Return of the Fund is the difference between the Total Return and the return of the Benchmark. Gross Returns (before fees) are calculated by adding back the fees and expenses deducted. Please refer to the PDS for more information on fees and expenses.

Portfolio and Market Returns

The Bentham Global Income Fund NZD had a total return (after fees) of 0.52% in the month of September, outperforming the benchmark (50% Bloomberg AusBond Bank Bill Index (hedged to NZD), 50% Bloomberg AusBond Composite Index (hedged to NZD)) by 1.26%. On a before fees basis the fund returned 0.58% for the month, outperforming the benchmark by 1.33%.

September was a negative month for global stock and government bond markets. Floating rate credit markets and the Bentham Funds were among the few sectors to generate positive returns.

The top contributors to performance included Global Syndicated Loans, Collateralised Loan Obligations (CLO) and Asset Backed Securities (ABS); whilst the bottom performing contributors included Investment Grade Credit, Bank Capital Securities and Global Hybrids.

The credit market outlook remains favourable, particularly floating rate markets with the potential to benefit from rising interest rates and higher inflation should it continue. The macro environment remains supportive; with vaccination rates rising which will allow activity to increase (particularly for Covid-19 afflicted industries such as tourism & travel), consumers have built up savings with pent up demand, and government fiscal policies have become extremely supportive.

Credit spreads (which provide additional yield above cash rates and bond yields) are likely to remain attractive in a low cash rate environment, and with less exposure to the risk of inflation. More broadly, market valuations have been heavily influenced by coordinated monetary and fiscal policy leading to higher asset prices in equities and government bonds.

Fund Distributions

Distribution frequency	Monthly
Monthly distribution ⁹	0.25% (Sep 2021)
Target distribution rate (FY22) ¹⁰	3.00%

³ Spread over the swap rate.

⁴ An assigned credit rating of BBB-/Baa3 or better by a credit rating agency.

⁵ Volatility is Standard Deviation.

⁶ Sharpe Ratio is the excess return over the Bloomberg NZBond Bank Bill Index (before fees) divided by Standard Deviation.

⁷ Tracking Error is the Standard Deviation of the Active Return (before fees).

⁸ Information Ratio is the Active Return (before fees) divided by the Tracking Error.

⁹ Calculated as the cents per unit (CPU) distribution at the month end divided by the ex-distribution unit price at the start of the month.

¹⁰ Bentham intends to achieve the distribution rate for FY2022 with taxable income. If there is a shortfall of taxable income, the distribution may possibly include a capital return. The current distribution rate setting was based on the running yield of the Fund as at 30 June 2021 and assumes the Fund continues to achieve an equivalent yield for FY2022. Actual distributions, however, can differ from this setting because of future matters which are not known or able to be presently identified.
