Portfolio and Market Returns

The Bentham Syndicated Loan Fund had a total return (after fees) of 1.22% in the month of January, outperforming the benchmark (Credit Suisse Leveraged Loan Index hedged into AUD) by 0.51%. On a before fees basis the fund returned 1.25% for the month, outperforming the benchmark by 0.54%.

Fund Statistics

At month end, the Fund had a yield to maturity of 9.04% and running yield of 8.23%, with the credit yield spread decreasing by 27 bps to 481 bps during the month. The Fund had an interest rate duration of 0.51 years and credit duration of 2.79 years.

Leveraged Loan Market

The discount margin (3 year) for the Index increased by 1 bps during the month to 529 bps.

The top performing leveraged loan industries in January were Retail, Utility and Food And Drug with returns (sector performance in USD terms) of 1.15%, 1.14% and 1.12% respectively. The worst performing loan industries were Food/Tobacco, Information Technology and Gaming/Leisure with returns of 0.48%, 0.50% and 0.52% respectively.

Portfolio Exposures

The Fund's three largest industry exposures are 14.5% in Electronics, 9.7% in Healthcare, Education and Childcare and 9.6% in Diversified/Conglomerate Service. The Fund's top three company exposures are 1.2% in Polaris Newco, 1.2% in Ukg and 0.9% in Iqera. During the month, the Fund increased its exposure to American Builders & Contractors Supply, Schenectady International and Tacala Investment; with decreased exposures to Presidio, Verde Purchaser and TransDigm.

Fund Distributions	
Distribution frequency	Monthly
Monthly distribution ⁹	0.73% (Jan 2024)
Target distribution rate (FY24) ¹⁰	1m BBSW + 4.5%

¹ Total Return (after fees) is calculated using pre-distribution month end withdrawal unit prices, and assumes all income is reinvested in additional units. Total Return equals Growth return (after fees) plus Distribution return (after fees).

² Active Return of the Fund is the difference between the Total Return and the return of the Benchmark. Gross Returns (before fees) are calculated by adding back the fees and expenses deducted. Please refer to the PDS for more information on fees and expenses.

³ Spread over the swap rate.

⁴The average credit quality is calculated using a duration adjusted Moody's Weighted Average Rating Factor (WARF) for both the S&P and Moody's security credit ratings within a portfolio.

⁵ Volatility is Standard Deviation.

⁶ Sharpe Ratio is the excess return over the Bloomberg AusBond Bank Bill Index (before fees) divided by Standard Deviation.

⁷ Tracking Error is the Standard Deviation of the Active Return (before fees).

 $^{^{\}rm 8}$ Information Ratio is the Active Return (before fees) divided by the Tracking Error.

⁹ Calculated as the cents per unit (CPU) distribution at the month end divided by the ex-distribution unit price at the start of the month.

¹⁰ Target distribution rates for FY24 set at one month Australian Bank Bill Swap Rate (BBSW) plus 4.5% of the monthly unit price. Bentham intends to achieve the distribution rate for FY2024 with taxable income. If there is a shortfall of taxable income, the distribution may possibly include a capital return.

The current distribution rate setting was based on the running yield of the Fund as at 30 June 2023 and assumes the Fund continues to achieve an equivalent yield for FY2024. Actual distributions, however, can differ from this setting because of future matters which are not known or able to be presently identified.

Past distributions are no indication of future distributions.

- ¹ Calculated as the cents per unit (CPU) distribution at month end divided by the ex-distribution unit price at the start of the month.
- ² Annual distribution return (Year-to-Date) is calculated as the Total Return (after fees) minus Growth Return. Total Return (after fees) is calculated using pre-distribution month end withdrawal unit price, and assumes distributions are reinvested. Growth Return equals the percentage change in unit price.
