⁴ The average credit quality is calculated using a duration adjusted Moody's Weighted Average Rating Factor (WARF) for both the S&P and Moody's security credit ratings within a portfolio.

⁵ Volatility is Standard Deviation.

⁶ Sharpe Ratio is the excess return over the Bloomberg AusBond Bank Bill Index (before fees) divided by Standard Deviation.

⁸ Information Ratio is the Active Return (before fees) divided by the Tracking Error.

⁹ Calculated as the cents per unit (CPU) distribution at the month end divided by the ex-distribution unit price at the start of the month.

¹⁰ Bentham intends to achieve the distribution rate for FY2026 with taxable income. If there is a shortfall of taxable income, the distribution may possibly include a capital return.

The current distribution rate setting was based on the running yield of the Fund as at 30 June 2025 and assumes the Fund continues to achieve an equivalent yield for FY2026.

Actual distributions, however, can differ from this setting because of future matters which are not known or able to be presently identified.
