<sup>1</sup> Total Return (after fees) is calculated using pre-distribution month end withdrawal unit prices, and assumes all income is reinvested in additional units. Total Return equals Growth return (after fees) plus Distribution return (after fees).

<sup>2</sup> Active Return of the Fund is the difference between the Total Return and the return of the Benchmark. Gross Returns (before fees) are calculated by adding back the fees and expenses deducted. Please refer to the PDS for more information on fees and expenses.

### Portfolio and Market Returns

The Bentham Global Income Fund NZD had a total return (after fees) of -1.10% in the month of May, underperforming the benchmark (50% Bloomberg AusBond Bank Bill Index (hedged to NZD), 50% Bloomberg AusBond Composite Index (hedged to NZD)) by 1.32%. On a before fees basis the fund returned -1.05% for the month, underperforming the benchmark by 1.27%.

The top contributors to performance included Syndicated Loans, Capital Securities and HY Bonds, whilst the bottom performing contributors included Interest Rate Duration, Credit Hedges and Tail Hedges.

Markets regained composure in May, supported by a U.S. court ruling against President Trump's proposed "Liberation Day" tariffs, which eased global uncertainty. Although temporarily upheld on appeal, the initial decision lifted investor sentiment. Easing trade tensions and ongoing U.S.-China discussions further reduced fears of a broader trade war.

In fixed income, U.S. 30-year Treasury yields rose 22bps to 4.9% over the month, driven by a weak 20-year auction and Moody's downgrade of U.S. sovereign debt from Aaa to Aa1, heightening fiscal concerns. Meanwhile, the RBA cut the cash rate by 25bps to 3.85%, supporting Australian market sentiment.

Global equities rebounded strongly. The MSCI ACWI rose 5.7%, the ASX 200 gained 4.2%, and the S&P 500's forward P/E climbed to 21.3x. In credit, U.S. high yield and syndicated loans outperformed, with Index spreads tightening and monthly returns of 1.6% and 1.5% respectively (AUD hedged).

The Fund's high-interest rate exposure (which provided protection against negative credit markets in April) acted as a drag in May. However, we believe this positioning continues to offer attractive real yields and downside protection. The Fund remains conservatively positioned, focused on high-quality, liquid credit and higher interest rate duration.

The current distribution rate setting was based on the running yield of the Fund as at 30 June 2024 and assumes the Fund continues to achieve an equivalent yield for FY2025. Actual distributions, however, can differ from this setting because of future matters which are not known or able to be presently identified.
