¹ Total Return (after fees) is calculated using pre-distribution month end withdrawal unit prices, and assumes all income is reinvested in additional units. Total Return equals Growth return (after fees) plus Distribution return (after fees).

² Active Return of the Fund is the difference between the Total Return and the return of the Benchmark. Gross Returns (before fees) are calculated by adding back the fees and expenses deducted. Please refer to the PDS for more information on fees and expenses.

Fund Distributions

Distribution frequency	Monthly
Monthly distribution ⁹	0.54% (May 2025)
Target distribution rate (FY25) ¹⁰	1m NZ BKBM + 3.5%

³ Spread over the swap rate.

⁴ The average credit quality is calculated using a duration adjusted Moody's Weighted Average Rating Factor (WARF) for both the S&P and Moody's security credit ratings within a portfolio.

⁵ Volatility is Standard Deviation.

⁶ Sharpe Ratio is the excess return over the Bloomberg NZBond Bank Bill Index (before fees) divided by Standard Deviation.

⁷ Tracking Error is the Standard Deviation of the Active Return (before fees).

⁸ Information Ratio is the Active Return (before fees) divided by the Tracking Error.

⁹ Calculated as the cents per unit (CPU) distribution at the month end divided by the ex-distribution unit price at the start of the month.

¹⁰ Target distribution rates for FY25 set at one month New Zealand Bank Bill Swap Rate (BKBM) plus 4.5% of the monthly unit price. Bentham intends to achieve the distribution rate for FY2025 with taxable income. If there is a shortfall of taxable income, the distribution may possibly include a capital return.

The current distribution rate setting was based on the running yield of the Fund as at 30 June 2024 and assumes the Fund continues to achieve an equivalent yield for FY2025. Actual distributions, however, can differ from this setting because of future matters which are not known or able to be presently identified.
